Basic GitHub terms

GitHub Flow

Create a repository

```
cd route/to/your/directory
echo "# My first GitHub repo" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/username/repo_name.git
git push -u origin main
```

At this point it will ask you for a username and a password for pushing.

Create a new repository
